DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mann (6231866) in view of Walker et al. (5,525,341) and Howell et al. (6,720,353).

Mann discloses a dried composition containing pomace (pulp) and juice from cranberries (a berry) (abstract). Claims 1 and 3 differ from the reference in that the acids and sugars have not been removed from the juice. However, Walker discloses a cranberry juice extract from which simple sugars and acid have been removed (abstract). Howell et al. disclose extracts from the Rosaceae (cherry family) (also claim 4) and cranberry containing juice from which sugars and acids were removed (abstract and col. 15, lines 15-30). The extract can be added to foods such as dried cranberries, fruit pieces or other foods (cranberries contain pulp) (col. 26, lines 24-28). No weight is given at this time to the limitation that the extract is dry as the claimed composition of the reference is to a dried product, free flowing supplement, i. e. a powder (abstract of Mann). Also, the composition can contain a pharmaceutically acceptable carrier and the extract (col. 22, lines 30-39). Claims 1 and 2 further require that the acids and sugars be removed by a particular method and that the other bioflavonoids are eluted in a particular manner and dried by a particular method. These are considered to be

Application/Control Number:

10/776,980 Art Unit: 1794

product by process limitations. However, no weight is given to the method of making in a composition claim. The fact that the procedures of the reference are different than that of applicant is not a sufficient reason for allowing the product-by-process claims since the patentability of such claims is based upon the product formed and not the method by which it was produced. See In re Thorpe 227 USPQ 964. The burden is upon applicant to submit objective evidence to support their position as to the productby-process claims. See Ex parte Jungfer 18 USPQ 2D 1796. It would have been obvious to use the acid and sugar extracted cranberry juice of Walker or Howell et al. in place of the unextracted juice of Mann in a composition containing pulp for the function of further nutritive enrichment particularly as Howell et al. disclose that her extract can be used with a carrier in admixture. Also, when applying a known method of removing acid and sugars from juice yields the predictable result of less sugar and acidity. As a dried product has been disclosed, no weight is given to the particular drying process of lyophilization since the results of drying the product are predictable, i. e. a dried product, absent a showing of anything unobvious in using a lyophilized product. Therefore, it would have been obvious to make a composition as disclosed by the combined references.

Claim 2 further requires a particular ratio between extracted berry juice and pulp. However, Howell et al. disclose that the amounts of the extract can be from 1 mg to 500 mg per day in tablets and other pharmaceutical compositions and food compositions (col. 13, lines 25-44). Also they can be used in amounts to eliminate symptoms (col. 24, lines 25-30). No criticality is seen in the amount of pulp, which is seen to be only a

Application/Control Number:

10/776,980 Art Unit: 1794

carrier for the extracted juice and has no nutritional effects. Therefore, it would have been obvious to use the juice and pulp in particular amounts for various functions.

ARGUMENTS

Applicant's arguments filed 11-5-07 have been fully considered but they are not persuasive. Applicant argues that the individual references do not disclose the invention. However, the references are used in combination as above to show that it would have been obvious to make the claimed product.

Applicant argues that the claims now require particular process limitations. As above, the process limitations are not given weight in a composition claim, unless product made by the process is an unobvious product, when compared in a showing to the prior art. Applicant would need to show that a composition made by retaining the bioflavonoids using an adsorption resin and eluting with ethanol, and drying using lyophilization to produce a powder, made a different product than one in which the sugars and acid were removed from the juice, leaving everything else in tact, and this juice was added to the berry pulp.

Applicant argues that Walker et al. "lacks significant amounts of anthocyanins". However, applicants have not claimed any particular amounts of anthocyanins and even so, nothing is seen that since it is known to extract sugar and acids from juice, that there would not be significant anthocyanins in the juice of Mann.

Applicants argue that Howell et al. relates to proanthocyanidin compounds.

However, the reference was used to disclose that sugars and acids were removed

10/776,980 Art Unit: 1794

cranberry juice. If the sugars and acids are removed from a berry juice, nothing is seen that the claimed bioflavonols would not be present in the composition.

Applicants argue that the references do not disclose a need to produce dried bioflavonoids as a lyophilized powder separately from the dried pulp. However, applicants are not claiming the composition in this manner, but are using process limitations in order to show how they are obtained.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Helen F. Pratt whose telephone number is 571-272-1404. The examiner can normally be reached on Monday to Friday from 9:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Milton Cano, can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
